Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-33 are rejected under 35 U.S.C. 102(b or e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over each of Daimon (6,413,691), Gutman (2003/0017406), or Hamano (2003/0104296). Daimon (col. 5-7 and col. 9 lines 24-30), Gutman (claims 2 and 9), and Hamano (paragraphs 65 and 96) each teach alumina particles used in similar aggregation/coalescence toner process that include sulfonated polyesters. In the alternative, it would have been obvious to use alumina particles with sulfonated polyesters in any similar toner processes because of the direct

suggestion of the references and the expectation of similar results due to the known effect of alumina particles with sulfonated polyesters in similar aggregation/coalescence toner process.

4. Claims 1-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over as applied to claims 1-33 above, and further in view of Hopper (6,416,920). Daimon, Gutman, and Hamano are discussed above. In addition, Hopper teaches alumina coated silica used in a similar manner and process to impart cationic properties (col. 14 lines 29-44). It would have been obvious to use alumina particles with sulfonated polyesters in any similar toner processes because of the direct suggestion of the references and the expectation of similar results due to the known effect of alumina particles with sulfonated polyesters in similar aggregation/coalescence toner process.
